## *The Nifty 385 and 430*

The Nifty 385 and 430 are at home on lakes, easy rivers, or as coastal sea and rock garden boats. Delsyk has 40 years of design and boat building experience to ensure that these kayaks will be the best you and your family will ever own. All Niftys are made with the highest quality, color-infused plastic so they will provide years of enjoyment under even the most demanding use.

The Nifty 430 is a medium size sea kayak with its signature double chine hull that gives the boat amazing stability. The Nifty 385 is slightly shorter and wider, which makes it even more stable. Both kayaks are designed so that you can learn the technical paddling skills that will help expand your horizons and ultimately, help keep you safe.

Delsyk Niftys are designed to paddle in a straight line and carve turns easily, just by leaning slightly to put the boat on edge. Their 'dolphin' bows lift up and over waves to help deflect spray, and flush hatch covers and expedition deck fittings help keep the decks, and you, dry. Safety is essential, so the Niftys have sealed bow and stern bulkheads. Accessing storage is easy through large neoprene covered hatches. The Nifty 385 bow compartment features a functional 8 inch round cover.

Ergonomic deck design and good body position are key to reducing body strain when paddling. In the Niftys' you can control your comfort. The unique seat has a wedge located under the front edge so you can adjust the seat angle and thigh fit. A comfortable backrest is easily adjustable, both in height and angle. The backband is standard in the skeg models and can be fitted to all Delsyk kayaks.

## *Skeg or Rudder Option*

A skeg, when deployed, keeps the kayak on track, neutralizing the effect of wind and waves. The Nifty skeg is located on the stern and is easily dropped into position by gravity when you release the deck line from its cleat.

The Nifty rudder provides more directional control than a skeg, useful for navigating technical routes where turning power and control is essential. Delsyk Design's high quality rudder is made of anodized and powder coated 6061 T6 aluminum for its superior strength and stiffness.
